

MATTHEW A. MCAULIFFE

Software Engineer | Client-Facing Technical Delivery

727.644.5049 | mcauliffem@icloud.com

PROFESSIONAL SUMMARY

Software engineer with hands-on production experience at AWS (Aurora PostgreSQL) and two years embedded directly with enterprise clients, translating business requirements into technical implementations. Skilled at owning the full arc from client problem to shipped solution: scoping requirements, building and deploying custom configurations, and partnering with engineering to resolve issues in production. Combines low-level systems engineering (C, Python, Bash, AWS APIs) with a track record of managing 100+ client relationships and driving measurable business outcomes.

PROFESSIONAL EXPERIENCE

RealTime Reservation | Remote 2024 – Present

Client Success Associate

Serve as primary point of contact for 130+ enterprise accounts, translating client business requirements into product enhancement requests and coordinating delivery with engineering.

Drove \$250K in annual incremental product revenue by identifying expansion opportunities and presenting data-backed quarterly business reviews to client stakeholders.

Identified underperforming clients and proactively drove action plans to improve trajectory and reduce client churn.

Application Support Analyst

Triaged and resolved technical support cases tracked in YouTrack and Salesforce, partnering with engineering to escalate and remediate product defects.

Delivered client site-build implementations during onboarding and kept SOP documentation current with each new product release.

Amazon Web Services | Seattle, WA 2019 – 2022

Software Development Engineer I - AWS Aurora PostgreSQL

Designed and implemented a buffer cache eviction algorithm in C to reduce CPU clock cycles under heavy memory pressure, improving constrained database performance for AWS Aurora PostgreSQL.

Built automated test pipelines in Python and Bash utilizing AWS APIs to validate changes across multiple cloud regions in pre-production and production, following Agile design and code-review practices.

Software Development Intern

Built and deployed internal tooling to monitor memory pressure, cache usage, and storage metrics within the database engine, logging data in a memory-efficient format to speed root-cause analysis of out-of-memory crashes.

EDUCATION

Georgia Institute of Technology | Atlanta, GA December 2019

Bachelor of Science in Computer Science — Concentration in Intelligence and Devices

GPA: 3.9 Overall / 4.0 Major — Highest Honors

TECHNICAL & PROFESSIONAL SKILLS

Languages & Tools: C, Python, Java, SQL, Bash, HTML

Cloud & Systems: AWS APIs, Multi-Region Deployment Pipelines, Databases, Machine Learning, Web Development, Robotics

Client Delivery: Technical Onboarding & Site Implementation, Solutions Consulting, Client Relationship Management, SOP Documentation, Salesforce Automation, Sales & Contract Creation
